Dear PVID Customer,

The PVID Board of Directors wants you to be aware of our work with a water resources consulting company named Jacobs Engineering Group. We will be performing an extensive groundwater and geophysical study of Potter Valley.

One of the steps of this study will require the use of a small drone with a sonar buoy that will fly over Potter Valley in a grid pattern performing an electromagnetic mapping survey of the subsurface geology. The flight is not expected to be long in duration and is planned for July 17-20, 2023. The information we gain from this study will help us determine the extent of our ground water basin and capability for storage.

The study is being funded through a Department of Water Resources grant attained by Sonoma Water, in a joint effort with the Mendocino County Inland Water and Power Commission. We are investigating new water storage options in Potter Valley in light of potential future changes to PG&E's PV Project diversion facilities.

Use this Link to view a map of the drone flight path.
